Superseded Document		Page 1 of 4
None		

Purpose

The purpose of the Product Risk Assessment tool is to document whether escalation will be initiated for potential reporting or market action determination per [LQS112, Regulatory Authority Communications and Inspections](#), or for product released to another Lilly site, if issue notification is needed per [GSOP-101-3, Notification to Management](#).

Scope

In Scope

This procedure applies to all areas whose job duties involve or are related to initiating deviations and completing initial fact finding as described in [LQS104, Quality Deviation Management](#), and associated procedures.

Out of Scope

This procedure does not cover departures that do not meet the definition of a deviation. Laboratory Investigations are out of scope of this procedure.

Instructions for Completing the Assessment

Responsible for this Section: Risk Assessor

Step	Description										
1	The assessment must be completed in cases where batches added to the product material info grid during initial assessment or post-assessment have been released to the market or to another Lilly site. The assessment must be conducted immediately (recommended within 24 hours from the date the situation is discovered).										
2	Download this source version of this tool and delete everything before the Assessment section, including the Revision History. Complete the documentation based on the descriptions in Table 1 below.										
3	Upload the completed assessment to the electronic document management system (e.g., Quality Docs) and apply the following metadata below to the fields specified below:										
	<table><tr><th>QualityDocs Field</th><th>Metadata/Convention</th></tr><tr><td>Document Name</td><td>Use the following naming convention: Product Risk Assessment [Deviation Number] </td></tr><tr><td>Type</td><td>Assessment</td></tr><tr><td>Lilly Designated Template</td><td>No</td></tr><tr><td>Information Classification</td><td>Yellow-Public</td></tr></table>	QualityDocs Field	Metadata/Convention	Document Name	Use the following naming convention: Product Risk Assessment [Deviation Number]	Type	Assessment	Lilly Designated Template	No	Information Classification	Yellow-Public
	QualityDocs Field	Metadata/Convention									
	Document Name	Use the following naming convention: Product Risk Assessment [Deviation Number]									
	Type	Assessment									
	Lilly Designated Template	No									
Information Classification	Yellow-Public										
4	Process the completed assessment for approval to the required approvers listed in Table 1.										

Table 1: Product Risk Assessment Field Descriptions

Assessment Field Name	Description
Discovery Date	Document the date of the discovery of the deviated state.
Assessment Date	Document the date when the risk assessment has been initiated.

Table 1: Product Risk Assessment Field Descriptions

Assessment Field Name	Description
Deviation Number	The Global Deviation Database record number of the deviation with the batch number in the product material info grid that was released to the market or to another Lilly site.
Material Number	The corresponding material number of the batch in the product material info grid that was released to the market or to another Lilly site.
Batch Number	The corresponding batch number of the batch in the product material info grid that was released to the market or to another Lilly site.
General Information	Location of Inventory: where the inventory is located during the time of assessment.
	Deviation Description: description of the deviation from the deviation record.
	Batch Bracket Rationale: description regarding batch bracketing from the deviation record.
	Product Quality Evaluation: description or reference to documentation stating impact on product or material quality. The justification for a conclusion of no product quality impact must be documented.
	Product Safety Assessment (PSA) Rationale: If the Product Quality Evaluation states there is impact on product or material quality considerations must be given to document a PSA per GQS132, Product Safety Assessments .
	Conclusion: Document the decision to proceed with escalation per LQS112, Regulatory Authority Communications and Inspections and/or GSOP-101-3 Notification to Management or document the rationale for why no escalation is necessary.
Approvers	M3 Technical Services /Manufacturing Science (TS/MS) (or the highest level at the site), and the Quality Leader M3, or above OR For Clinical Radiopharma Chemistry, Manufacturing, and Controls (CMC) M3, equivalent, or above

Product Risk Assessment	
Discovery Date: Click here to enter a date.	
Assessment Date: Click here to enter a date.	Deviation TR #: Click here to enter TR #.
Material Number(s) and/or Batch Number(s): [enter material / batch numbers here]	
General Information:	
a. Location of Inventory: Click here to enter text.	
b. Deviation Description: [enter description here]	
c. Batch Bracket Rationale: [enter rationale here]	
d. Product Quality Evaluation: [enter evaluation here]	
e. Product Safety Assessment Rationale: [enter rationale here]	
f. Conclusion (<i>select one</i>): ☐ Escalation will be initiated per LQS112, Regulatory Authority Communications and Inspections , and GSOP-101-3, Notification to Management . The potential risk to human health is high, regulatory agency notification is needed, or there is a potential recall/stock recovery situation. For batches released to another Lilly site , document the mechanism for notification to the Lilly site(s): [enter notification mechanism here] ☐ Escalation is not needed. The potential risk to human health is low, no regulatory agency notification is needed, and/or there is no potential recall/stock recovery situation.	
Rationale for not initiating escalation: [enter rationale here]
