Purpose

The purpose of this procedure is to know the handling of SAP Business Support forms (BSR) , business service request and its component as appropriate. The following BSR are in scope of this document:

- TMS Master Data Request

[The SAP Business Support Site request types page](#)

Scope

This procedure applies to *state scope and click correct boxes below*.

This practice pertains to the following types of operations:

- | | | |
|--|----------------------------------|--|
| ☐ materials receipt | ☐ testing | ☒ storage |
| ☐ production | ☐ release | ☒ distribution |
| ☐ packaging | | |

This practice manual pertains only to the types of products noted below:

- | | |
|---|--|
| ☐ raw materials | ☒ finished products |
| ☐ intermediates | ☐ animal health premixes |
| ☒ active pharmaceutical ingredients | ☒ medical devices |
| ☒ bulk drug products | ☒ drug/device combination products |
| ☒ drug products | |

1.0 Introduction

This procedure defines the process of handling business service request. For example, when to log business service request, how the processor is notified & how priority is handled etc.

1.1. Purpose/Scope

The purpose of this activity is to know the handling of SAP Business Support forms (BSR) business service request and its component as appropriate.

The following BSR are in scope of this document.

2. TMS Master Data Request

a. TMS Master Data Request

[The SAP Business Support Site request types page](#)

1.2. Areas Involved

Global Business Solutions

1.3. Audience

This document provides information and procedures for system users assigned to the following entities or organizations:

- TMS End Users
- Local Site QA/ Global QA.
- LCCI TMS Master Data Team

1.4. Start/Stop Points

This SOP starts when a BSR is created and stops when a BSR is solved (closed)

1.5. Definitions

- **SAP** – A set of software modules, which are integrated and span most business functions including manufacturing, finance, sales, distribution, and human resources.
- **TMS**: Transport Management System

2.0 Process Overview

2.1. BSR created by Processor vs. created by customer

BSRs should be created by the customer. There are some instances where processor will create it on behalf of the customer. But the preference is to have the customer creating their own BSRs or create them on behalf of somebody else from the business as required.

Global Logistics GLX-SOP-0012		
Version number 1	Document Title TMS - Production Support BSR Process	Associated GQS GQS304
Effective Date See Regulus		Secondary GQS GQS301
Superseded Document New Document		Page 4 of 10

1. Per procedure the following BSRs are created **always** by the customer:
 - a. SAP Create Shopping Cart
 - b. SAP or Non-SAP Security

2.2. BSR Forms: When required and Customers

Tower: TMS Request

A. Transport Management System (TMS)

1. TMS Master Data Request

Required when the user needs support from the TMS master data team, related to Master data setup such as lanes setups, Locations (Airports/Seaports), One time Location creation for Non ERP orders, Schedules (Milkruns), Product pallet information, Container determination (Air Active/ Passive & Ocean Containers, Customer Email Id's, Forwarders email id, Email determination signature, Passive Temp Group, Temp Group etc.

2.3. BSR Acceptance and Service Hour

When the processor accepts the BSR then he/she must mention the date of acceptance. The service window to accept the BSR is as follows:

AREA	Hours of Service	Hours of Service for Indy Hours
TMS Master Data	9am IST (Bengaluru) – 5pm IST	2 am to 10 am

Additional considerations:

- The hours of service are applicable to regular working days only (Monday – Friday), there is no weekend coverage
- Local holidays for the trackers will be observed and might impact service hours (especially holidays in India or the US, where larger parts of the teams are located)
- US summer shutdown and year-end shutdown will impact service hours for the US

Effective Date See Regulus		Secondary GQS GQS301
Superseded Document New Document		Page 5 of 10

2.4. Handling when the wrong BSR has been chosen

As the request type cannot be changed after initial selection, we will reject the BSR and provide the user with the appropriate link/group and add the rejection reason (if available as a field at the BSR Share Point List). If the BSR is a critical request, the GBS processor will submit the correct BSR form on behalf the customer.

If there is discussion and alignment with the receiving processor is needed see contact list.

1. Transport Management System (TMS):

Shared Inbox-

TMS Master data team: DATA_TEAM_TMS@lilly.com
TMS BPKC team: BPKC_TMS@lilly.com

2.5. Handling when the issue and Business function / Subfunction not related each other (Only for SME Consulting BSR)

- Contact the should-be owner and after confirmation, change the business / sub function (see contact lists above).
- Inform the end user and him/her to choose appropriate form next time.

2.6. Handling when a wrong type of request has been chosen

When the type of request is editable at the SharePoint list, then the Processor will change the Request Type and inform end user accordingly.

2.7. Priority

A BSR priority is usually determined by assessing its impact and urgency: 'Critical & Urgency' is a measure how quickly a resolution of the BSR is required. 'Impact' is measure of the extent of the issue and of the potential damage caused by the issue before it can be resolved.

Priorities are:

- Critical (2 hours):
- Urgent (1 business day)
- Standard (3 business days)
- Future

Global Logistics GLX-SOP-0012		
Version number 1	Document Title TMS - Production Support BSR Process	Associated GQS GQS304
Effective Date See Regulus		Secondary GQS GQS301
Superseded Document New Document		Page 6 of 10

Critical: means to accept and the processor must reach out to user within two hours with first response. If it can be completed within those 2 hours, it will (working hours).

Urgent: means to accept and make best attempts to get the request completed within a day (1 business days)

Standard: means to accept and resolve the issue in 3 days. (business days)

Future: To be completed by the "date needed" or if no date needed it will be done as time permits. (business days)

2.8. BSR Notification and Monitoring

1. Team members receives an automatic email notification when a request is created.
 - Available team members distribute the open requests among them by availability, customer or by regional area as appropriate according to each team.
2. Team members will review the SharePoint list on a regular basis during the day.
3. Receive emails for Urgent/Critical requests via SharePoint alerts, (everybody who is working on production support should set up this alert individually).

2.9. BSR Lifecycle

The following are the different BSR status:

- Open
 - Rejected
 - Cancelled by Requester
 - In Process
 - Awaiting Response
 - Awaiting Approval (**Second Person Approval-GMP**)
 - Awaiting Validation (**First Person Approver-GMP**)
 - TMS MD Processing
 - Closed
1. **Open Status:** By default, new requests will have a status of 'Open', BSR hasn't been accepted by any Processor.
 2. **Rejected Status:** BSR not issued for the right team.
 3. **Cancelled by requestor:** When requestor says he/he submitted in error (or some other reason) and they want to cancel the request.
 4. **In Process Status:** When one processor has picked it up and started working on it.
 5. **Awaiting Response Status:** When something not clear and asked user to provide more details about the issue & waiting for their reply.

Global Logistics GLX-SOP-0012		
Version number 1	Document Title TMS - Production Support BSR Process	Associated GQS GQS304
Effective Date See Regulus		Secondary GQS GQS301
Superseded Document New Document		Page 7 of 10

6. **Awaiting approval:**

- Typically the status is meant for 2nd Person to verify the updates made by the processor on the request. The Second person should be from Local QA.

7. **Awaiting Validation Status:** In case proposed solution needs to be validated by the user & waiting for his/her response (some of the teams are not using this one).

- Exception: Awaiting Validation is used by the SC BSR: • If there is a need to add a secondary person to a request. Add that person's name to the "Assigned To (secondary)" field and change the status to "Awaiting Validation" to trigger an email notification notifying that person that their attention is needed on the request BSR as required.

8. **Closed Status:** Request has been completed.

- Note: If the BSR closed, this should not be put back to in process or any other status as it will affect the SLA matrix and reporting. Ask user to log/submit another.

2.10. **BSR Outputs**

Depending on the BSR:

- Main outputs are about the nature of BSR
- Some others use root cause for analysis
- New Issues identification
- Repetitive issue identification

2.11. **Systems Supported**

BSR	SYSTEMS
Transport Management System (TMS)	SAP TMS (Module within SAP)

2.12. **BSR Closing**

Processor will close the BSR as follows:

- Add comments/solution to the processor's field.
- If email chains exist outside of the BSR comments, the processor will attach them to the BSR.
- When sending an email to the user to look for solution acceptance, if the user does not respond after two reminders the BSR will be closed.
- Choose "Close" status and save
