ELI LILLY AND COMPANY
North American Logistics Operations

Reporting On-the-Job Injuries, Illnesses, and Near Miss Incidents

USD-SOP-Rptg Injuries Illnesses Incidents-001

SUPERSEDES 001-002580, Training Course DOHS007

PURPOSE To instruct North American Logistics Operations (NALO) employees how to report on-the-job injuries, illnesses, and near miss incidents. Also, to explain how the incident reporting and investigation requirements included in this procedure relate to the overall investigation process.

AREAS INVOLVED NALO Operations and support areas

REASONS FOR REVISION All revisions are marked with an (*):

To add information to the Introduction regarding safety critical jobs. This includes adding GPME-SOP-ADM-IN-IICASEMGMT-3006 to the References section.

- Rationale: To include requirements.

DEFINITIONS

1. Health and Safety Incidents – Injuries or near misses that can result from an Event (i.e. out of the ordinary incident). Some examples can include personal injury, illness, property damage and facility evacuations.
 2. Illness – Any abnormal condition or disorder, other than one resulting from an injury, caused by exposure to environmental factors.
 3. Investigation – The follow-up process that occurs after an incident that can include interview(s) to gather facts, root cause analysis, corrective actions, communication of facts, and documentation. Also, investigations help determine the work-relatedness, and OSHA recordability status of an injury/illness.
 4. Injury – An injury involves a case where a person was hurt as a result of the incident and needed to report for medical attention.
 5. Near Miss – A near miss is a mishap that could have (but did not) result in personal injury. Near miss incidents may also have the potential to cause serious damage to (Lilly Assets) property, equipment, or the environment (such as potential for explosion, fire, chemical release).
 6. OSHA-Recordable Injury/Illness – All work-related deaths and illnesses, and work-related injuries which result in loss of consciousness, restriction of work or motion, transfer to another job, and/or medical treatment beyond first aid.
-

INTRODUCTION

Any injury, illness or near miss incident that occurs at work or may be related to the workplace, must be reported immediately. The two main benefits of immediate reporting are (1) care from medical professionals can reduce the chance of an injury becoming more serious, and/or (2) immediate investigation can begin.

Even minor injuries must be reported to your supervision. If you are unsure about the severity and need for treatment of an injury, report and discuss the incident with your supervision. You must also report to your supervision if you use material from a company-provided First Aid Kit. Examples of minor injuries include: If you feel a pull or hear a pop in your back but feel no immediate pain, and minor cuts.

NALO investigates all injury/illness and near miss incidents. The primary purposes for investigating all incidents are to learn from them so that future, similar incidents can be prevented, and to ensure that accurate determinations and recordkeeping occurs.

*Employees who are in safety critical jobs must report to EHS if the employee is taking any potentially sedating medication. EHS must consider the employee's job-related tasks and usage of the medication. Safety critical jobs are determined locally by HSE and must be communicated to affected employees.

**REPORTING
ON-THE-JOB
INJURIES AND
ILLNESSES**

NALO employees follow these steps to report all injuries/illnesses that occur as a result of work.

Note: Delays in reporting on-the-job incidents (injury, illness or near miss) can prevent effective incident investigation. Investigation supplies information to help prevent the incident from reoccurring and helps the Indianapolis Occupational Health and Safety Department (i.e. Site OSHA Recordkeeper) make work-relatedness and OSHA Recordability status determinations (see Attachment A).

Step	Action														
1	Inform Supervision of the injury/illness, even if it appears to be a minor incident. Note: This communication should occur immediately. Note: Supervision will immediately communicate injury/illness to Management.														
2	Determine next steps as a team with NALO HSE Representative and area management: <table> <tr> <th>If</th><th>Then</th></tr> <tr> <td>Injury is very minor and self first aid can be administered (i.e. a paper cut that requires a band-aid),</td><td> - Employee administers first aid from the first aid kit. - Employee signs on to EHS collaboration site using system ID and password and clicks "Report a Work Related Injury/Illness". - Employee completes the electronic form that is submitted to EHS. - Supervision initiates a CAPA/Trackwise event. </td></tr> <tr> <td>Injury is ergonomic in nature,</td><td> - Supervision contacts athletic trainer and area Management for notification. - Athletic trainer follows up with employee. - Athletic trainer contacts site supervision with recommended next steps. - Site supervision, NALO HSE Representative and athletic trainer agree on path forward and communicate with employee. Note: If athletic trainer cannot be reached, contact the NALO HSE Representative to assist in contacting an athletic trainer. </td></tr> <tr> <td>Any other type of injury or illness,</td><td> - Go to designated health care provider for medical treatment and recordkeeping. - Deliver any paperwork generated from your health care provider to supervision. - Follow the health care provider's recommendations. </td></tr> </table> Designated Health Care Providers <table> <tr> <td>Enfield, CT,</td><td>Concentra Medical Center</td></tr> <tr> <td>Fresno, CA,</td><td>Concentra Medical Center</td></tr> <tr> <td>Indianapolis, IN, Plainfield, IN,</td><td>Lilly Employee Health Services and/or Hendricks Regional Health Occupational Medicine Center</td></tr> </table>	If	Then	Injury is very minor and self first aid can be administered (i.e. a paper cut that requires a band-aid),	- Employee administers first aid from the first aid kit. - Employee signs on to EHS collaboration site using system ID and password and clicks "Report a Work Related Injury/Illness". - Employee completes the electronic form that is submitted to EHS. - Supervision initiates a CAPA/Trackwise event. **REPORTING
NEAR MISS
INCIDENTS**

NALO employees follow these steps to report near miss incidents (see Attachment A).

Note: Delays in reporting on-the-job incidents (injury, illness or near miss) can prevent effective incident investigation. Investigation supplies information to help prevent the incident from reoccurring.

Step	Action
1	Immediately inform supervision of the near miss. If applicable, do not move equipment, materials, tools, etc. which were involved in the incident.
2	Assist the investigation process by sharing information about the incident and by participating in resulting root cause analysis actions.

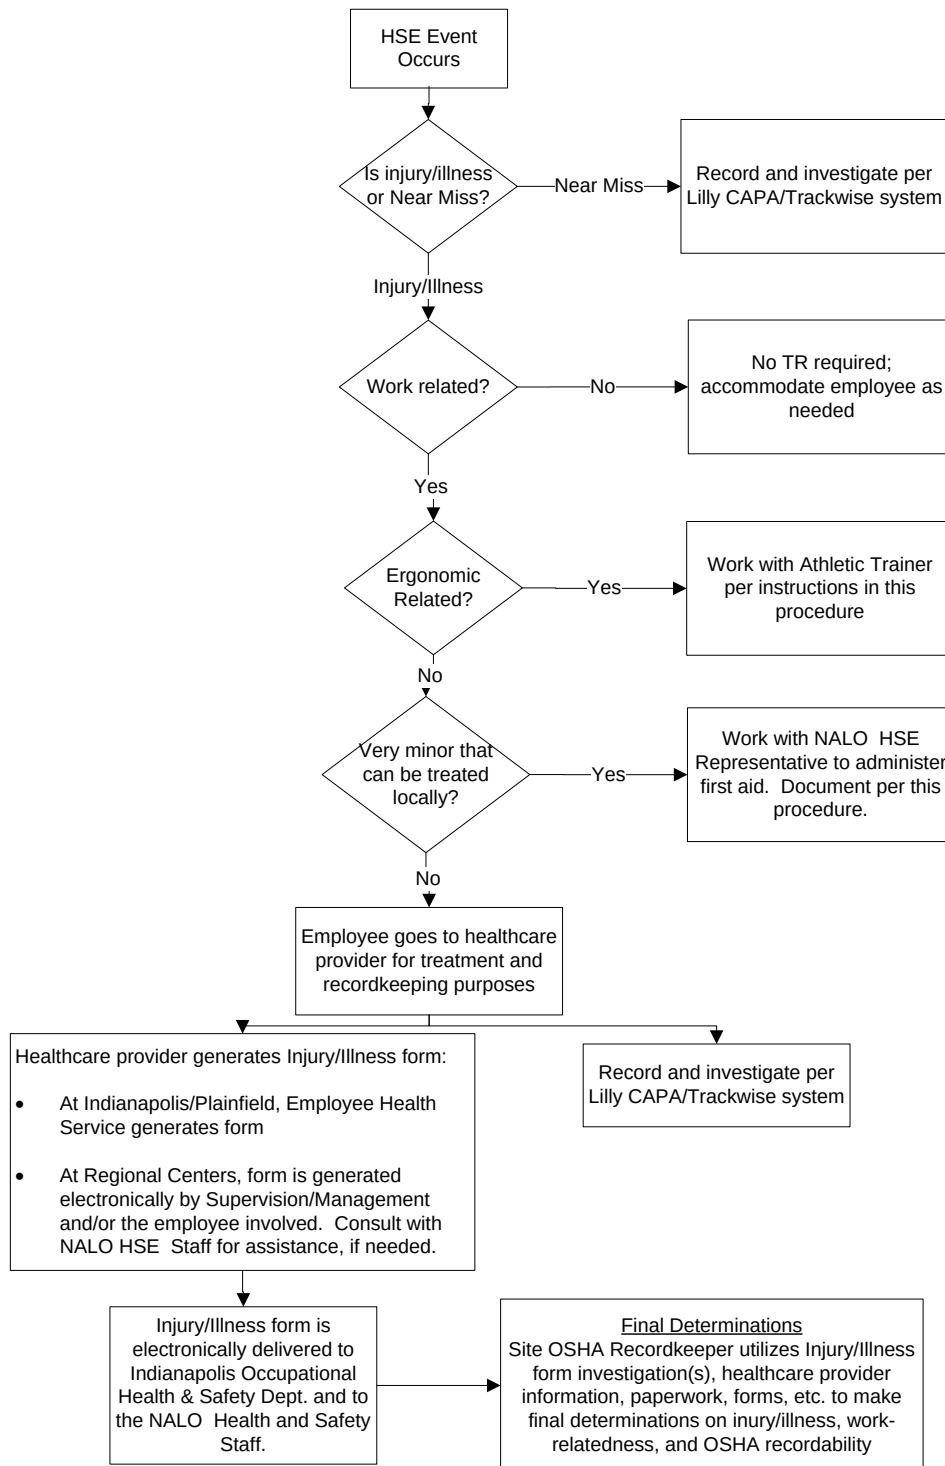

**DOCUMENTING
ON-THE-JOB
INJURIES,
ILLNESSES,
AND NEAR MISS
INCIDENTS**

Supervision documents reported on-the-job injuries, illnesses, and near miss incidents within the Trackwise Event Management system. Refer to USD-SOP-Deviation Mgmt-001 for these instructions.

Attachment A
Investigation Process Flowchart**INVESTIGATION PROCESS FLOWCHART**

The following flowchart is an overview of the major elements of the reporting/investigation process.

Note: Reference the Global Health and Safety Standard for additional Injury/Illness Case Management guidance and details.
