Purpose

This global required tool describes the process of creating and executing Trend Triage records within the Quality Incident (QI) module of the Global Deviation Database (GDD).

Scope

In Scope:

Potential trends identified in the Periodic Deviation Monitoring Reports (PDMR), Ad hoc Deviation Monitoring, and In Quality Deviation Emerging Themes that require further assessment to determine if a deviation is necessary to investigate an issue or if an opportunity to improve the process is identified.

Out of Scope:

Identified trends outside of GDD. Issues which are not considered suspected trends.

Table of Contents

1.0 Process Overview for Trend Triage Record Execution	1
2.0 Create the Trend Triage Record	1
3.0 Conduct the Trend Triage Assessment.....	2
Revision History.....	3

1.0 Process Overview for Trend Triage Record Execution

Suspected trends may originate from sources such as in-deviation recurrence checks (for example, emerging themes), ad hoc monitoring of deviation data, or PDMR. All identified suspected trends are documented within the Quality Incident module as a Trend Triage record to assess whether further investigation is necessary.

2.0 Create the Trend Triage Record

Step	Activity	Related Information	Responsible
1	Create the Quality Incident Record from Emerging Themes or Ad Hoc Monitoring	Condition: Create a Trend Triage record type within the Quality Incident (QI) module within one (1) business day of identifying the issue which requires evaluation. Trend Triage records are automatically given a two (2) calendar day due date from the date of creation.	Initiator
2	Create the Quality Incident Record from PDMR	Condition: Create a Trend Triage to document PDMR within the Quality Incident (QI). Create a Trend Triage record as soon as possible after completing the PDMR analysis and data gathering.	Process Owner (Initiator)
3	Assign the Trend Assessment Team	Assign the team members of the record. They will assess and determine if a deviation is required.	Initiator

2.0 Create the Trend Triage Record

Step	Activity	Related Information	Responsible
4	Attach Validated Data to the Record	Condition: Periodic Deviation Monitoring Reports, ad hoc deviation monitoring, and recurrence checks suspected trends of evaluation. Attach the data to the QI record and include a summary of the data insights and the outcome of the evaluation. Data may include reference to the PDMR report, validated Veeva reports, or recurring deviation record numbers reference.	Owner
5	SME Input Required	Condition: An Optional SME is added to the team to provide SME input. When the QI Owner requires support in the evaluation of a potential trend, the optional SME may add information/ insights to support the Trend Triage.	Optional SME
6	Conduct the Review Prior to Assessment	Review the record for completeness and accuracy. Provide updates to the record, as needed. Include pictures or other attachments as needed to support the written description of the issue.	Owner

3.0 Conduct the Trend Triage Assessment

Step	Activity	Related Information	Responsible
1	Complete the Triage Results	Review the Trend Triage record and provide the assessment outcome (decision) for the issue. Select either: “No Trend - No Action Required” - OR “No Trend - CI Required” - OR “Trend - Deviation Required”	Assessor
2	Request Additional Information	Condition: The Trend Triage record is not complete or more information is required to perform the assessment. Select the option for additional information to be required for the record. The record will be returned to the record owner to update as requested.	Assessor
3	Complete the Assessment with “No Trend - No Action Required”	Condition: The triage results indicate that it is not a trend and no further action is needed. Select “No Trend - No Action Required” when a trend has not been confirmed and no further action is needed. Provide justification and close the record.	Assessor

3.0 Conduct the Trend Triage Assessment

Step	Activity	Related Information	Responsible
4	Complete the assessment with "No Trend - CI Required"	Condition: The triage results indicate that it is not a trend but opportunities for improvement have been identified. Select "No Trend - CI Required" when a trend has not been confirmed but Continuous Improvement (CI) actions have been identified to improve the process. If a CI is already in progress, relate the CI to the trend triage record. Where no CI is in progress, a new CI record is automatically created. The Assessor is assigned as the owner of the newly created CI record. Refer to global procedure GSOP-1102.2, QMS Continuous Improvement.	Assessor
5	Complete the Assessment with "Trend - Deviation Required"	Condition: The triage results indicate it is a trend. Select "Trend Trend - Deviation Required" when a trend has been confirmed, or the assessment has been determined to be inconclusive and further investigation is required. If a deviation is already in progress, relate the deviation to the trend triage record. Where no deviation is in progress, a new deviation record is automatically created. The Assessor is assigned as the fact finder of the newly created deviation. Refer to global procedure GSOP-104-1, Record Creation & Fact-Finding.	Assessor

Revision History

Version Number	Effective Date	List of Major Changes
3	Effective date viewable in eDMS.	As per TR40976499: included the Continuous Improvement module in section 3.0 step 4 and updated the verdict names in section 3.0 step 3 and step 5
2	15-Jan-2026	Reworded scope to include the Periodic Deviation Monitoring Report and clarification. Reworded Section 1.0, Overview. Introduced Section 2.0, Step 2.0, to include instructions for Quality Incidents generated by a PDMR. Added Clarification in Section 2.0, Step 5, SME Input Required. Added Clarification in Section 3.0, Step 2, Request Additional Information. Corrected Associated Procedure metadata in header to GSOP-104-7.
1	14-Jul-2025	First version of this global quality required tool.
