Approved by (printed name and title):
Bryce Hufford, Associate Vice President – Global Quality Systems
Ciara Keohane, Senior Advisor – Global Quality Systems - Continuous Improvement

Purpose

The purpose of this procedure is to describe the responsibilities and activities related to the execution of Deviation Record Creation and Fact Finding processes and define a consistent global approach across organizations aligned with the requirements described in [LQS104, Quality Deviation Management](#).

Scope

In Scope

This procedure applies to all areas whose job duties involve or are related to initiating deviations and completing initial fact finding as described in [LQS104, Quality Deviation Management](#), and associated procedures.

Out of Scope

This procedure does not cover departures that do not meet the definition of a deviation. Laboratory Investigations are out of scope of this procedure.

1.0 Procedure Overview

Refer to [Quality Management System \(QMS\) Vault Deviation Process Diagrams](#) (SPEC-264498) for a detailed overview of this procedure.

2.0 Record Creation

Step	Activity	Related Information	Responsible
1	Create Deviation Record in Global Deviation Database (GDD)	Create the Deviation Record within one business day of the Date of Discovery and include information to describe the deviation. Justification/ rationale must be included in the record Description field if this timing is missed. Add the date of occurrence to the deviation record when this date is known. Note: When deviation records are initiated from a Laboratory Investigation or from a Quality Incident (for example, Intracompany Issue), the system will apply the Date of Discovery from the respective originating record. For Quality Deviations, refer to GSOP-104-6, Laboratory Investigations , and GSOP-104-1-TL-5, Intracompany Issues .	Initiator
2	Deviation Due Date Assignment	Due dates are automatically assigned by the system. Internal deviations are assigned a due date of 30 calendar days from the Date of Discovery. External deviations are assigned a due date of 45 calendar days from the Date of Discovery. For Quality Deviations, refer to GSOP-104-5, External Deviations .	N/A
3	Create Multi-Track Deviation Records	Condition: Multiple Level 1 organizations involved in deviation Select Multi-Track Deviation for a deviation which has occurred that impacts more than one Level 1 Organization. Refer to GSOP-104-1-TL-2, Multi-Track Deviations .	Initiator, Fact Finder
4	Create Deviations with Unblinded Information	Condition: Deviation with unblinded information If the deviation is related to systems or processes that are used to maintain the blinding for a Clinical Trial and the details of the departure, impact assessment, investigation, CAPA, or attachments, include subject treatment information, select "Yes" in the "Does this Record Contain Unblinded Info?" field. Condition: External deviation with unblinded information If the condition above applies and the deviation is initiated by, or requires collaboration with, an external party, follow the guidance above and utilize the Child Investigation record to manage the information from the external party.	Initiator, Fact Finder

2.0 Record Creation

Step	Activity	Related Information	Responsible
5	Deviations Requiring External Collaboration	Condition: There is a need to have an external party contribute to or add to a quality record. When there is a need to have an External Party contribute or add to a record directly within the Global Deviation Database (GDD), use the external collaboration feature. For Quality Deviations, refer to GSOP-104-5-TL-1, External Collaboration.	Initiator, Fact Finder
6	Deviation was Initiated by External Party Organization	Condition: External party initiates a deviation in their quality management system If a deviation was initiated or caused by the External Party and must be reported and tracked as described in relevant agreements or contracts, use the External Deviation Process. For Quality Deviations, refer to GSOP-104-5, External Deviations.	Initiator, Fact Finder
7	Assign Team	The role associated with executing the next action in the workflow must be specified prior to advancing the record. All other roles may be pre-populated. To complete Fact Finding, the Fact Finder and READY Assessor roles must be assigned. Assigning the record to the READY Assessor serves as notification to the functional representative (for example, Quality).	Initiator, Fact Finder
8	Assign Team for Unblinded Deviations	Condition: Deviation record with unblinded information If the deviation record contains unblinded information, ensure that all individuals assigned to the Team (including Fact Finder, Quality READY Assessor, Lead Investigator, Reviewers, Final Approvers, Quality Approvers) are permitted to view the unblinded data based on role (for example, are in unblinded roles) or as per the clinical study Blinding/Unblinding plan. Consult the project statistician for the clinical study or your supervisor for additional direction as needed.	Initiator, Fact Finder

3.0 Conducting and Completing Deviation Fact Finding

Responsible for this Section: Fact Finder

Step	Activity	Related Information
1	Fact Finding Requirements	Add available data and facts to the deviation record to ensure the READY Assessor has the information needed to correctly classify the deviation.
2	Batch Involvement	Select the appropriate option for Batch Involvement and include the batch bracketing rationale, if applicable. For Quality Deviations, refer to GSOP-104-1-TL-1, Batch Bracketing.
3	Include Involved/ Impacted Objects	Add objects involved in or impacted by the deviation to the appropriate sections.

3.0 Conducting and Completing Deviation Fact Finding

Responsible for this Section: Fact Finder

Step	Activity	Related Information
4	Clinical Study Involved	Condition: Clinical study is involved If a clinical study is involved, ensure the object for the clinical study is completed.
5	Impacted Country Object	Condition: International Business Unit Quality Assurance (IBUQA) deviation The Impacted Country object must list all impacted and involved countries for quality deviations where a Level 1 organization is IBUQA.
6	Create User Tasks	Condition: Additional information or task is required to be completed by other personnel Create and assign a User Task to other personnel for completion. Include details about the task to be performed and a due date for the completion of the User Task.
7	Conduct Interviews	Condition: An interview is needed to support fact finding. When an interview is needed to support Fact Finding, create and assign a User Task to the interviewer to document the output of interviews including the date of conversation, name and role of interviewee(s), and a summary of the relevant information discussed.
8	Create Impact Assessments	Condition: Impact assessment(s) for quality deviation is required to be completed by other areas/ functions. For Quality Deviations: Create and assign Impact Assessment records to other areas/functions who have been impacted by the originating organization. If an organization impacts its own organization, an Impact Assessment record does not need to be used.
9	Create Quality Alerts	Condition: Deviations involving computer system events with impact to non-IT business areas Contact the appropriate personnel (for example, Business Quality Assurance (BQA)) to create and send a Quality Alert or Quality Alert Addendum. Refer to GSOP-104-1-TL-3, Quality Alerts .
10	Complete Fact Finding	Complete all relevant information on the deviation record. Analyze the content of the description and immediate steps to ensure that the content is complete and contains appropriate information in the fields. Refer to GSOP-104-3-TL-5, Artificial Intelligence for Deviations . Send the record to READY Assessment. For Quality Deviations, refer to GSOP-104-2, READY Assessment .
11	Address Rejection by READY Assessor	Condition: The record was rejected by the READY assessor. The READY Assessor may determine that additional information is needed to complete the assessment and reject the record. Address the rejection and resend the record to READY Assessment. For Quality Deviations, refer to GSOP-104-2, READY Assessment .
