**REASONS FOR REVISION**

All revisions are marked with an (\*):

1. To add a Note to the Introduction regarding using/processing Attachment A, Market Action Response Plan Checklist (USD-SOP-Recalls and Mkt Wdrawals-001 Att A) every time regardless of a recall or mock recall.
    - Rationale: TR40767349.
  2. To remove references to Fresno throughout the procedure.
    - Rationale: CC40755631.
- 

**DEFINITIONS**

Effectiveness Check – See the LQS Glossary.

Health Hazard Evaluation (HHE) – See the LQS Glossary.

Market Withdrawal – See the LQS Glossary.

Recall – See the LQS Glossary.

Recall Classifications – See the LQS Glossary.

Recall Strategy – A planned specific course of action to be taken in conducting a specific Recall, which addresses the depth of Recall (can be based on the Recall Classification), need for public warning, and extent of effectiveness checks for the Recall.

**INTRODUCTION**

The following attachments reside in the electronic document management system:

Attachment A, Market Action Response Plan Checklist (USD-SOP-Recalls and Mkt Withdrawals-001 Att A)

Attachment B, Incorrectly Shipped Registry Governed Product Response Plan Checklist (USD-SOP-Recalls and Mkt Withdrawals-001 Att B)

Attachment C, Affiliate Recall-Mock Recall Information (USD-SOP-Recalls and Mkt Withdrawals-001 Att C)

Attachment D, Market Action Process Flow (USD-SOP-Recalls and Mkt Withdrawals-001 Att D)

**\*Note: Process Attachment A, Market Action Response Plan Checklist (USD-SOP-Recalls and Mkt Withdrawals-001 Att A) each time, regardless of a recall or mock recall.**

**It is the responsibility of every individual in NALO to immediately report information that could potentially result in a Recall or Market Withdrawal.**

Information concerning a product defect which could potentially lead to a Recall or Market Withdrawal includes, but is not limited to, any circumstance where the product quality, fitness for use, or performance of a marketed product or device is in question due to:

- deviations
- stability issues
- potential contamination
- failure to meet specifications
- issues with labeling or label text
- product complaints
- adverse drug reactions or adverse events due to product quality issues
- confirmed or verified product tampering, counterfeiting or falsification associated with Lilly product and/or packaging from the legitimate supply chain or identified with a Lilly batch number that is valid for the material and indicated dosage
- audit results
- biological product deviation reports (BPDRs)
- medical device reports (MDRs)
- medical devices that may cause unacceptable risk to health (e.g., device functional failures) or
- any source of information, including sales and marketing personnel and contract manufacturers, where the product quality, fitness for use, or performance of marketed drug product or device is in question.

Recalls and Market Withdrawals may also be initiated at the request of a regulatory agency.

Recalls or Market Withdrawals may lead to an internal review in accordance with LQS111.

This procedure outlines NALO QA, NASSC-CS and Finished Good Returns responsibilities during a recall or market withdrawal. For a basic understanding of all responsibilities during a recall, see GQS131. Ensure that CQP-131-1 is also followed. For a basic understanding of all responsibilities during a market withdrawal, see LQS135.

**INTRODUCTION,  
CONTINUED**

Recall and Market Withdrawal activities must be capable of being initiated promptly and effectively at any time. In some cases, the recall may need to be initiated prior to establishing the root cause(s) and full extent of the quality defect. Where the potential exists for a significant safety issue for the patient, the decision to recall or withdraw must be made as quickly as possible. In addition, NALO management must ensure that NALO QA is supported by sufficient staff to handle all aspects of the market action with the appropriate urgency.

The effectiveness of the actions within this procedure must be evaluated every 2 years. It has been determined that NALO QA will ensure that this requirement is met by using the Self-Inspection process. It is important to test a scenario when the event causing the recall or market withdrawal happened in distribution. NALO also participates in simulations led by Global Quality Auditing and Compliance (GQAAC) or other areas as required. Refer to CQP-131-1.

If NALO has participated in the GQAAC Simulated Market Action (participation is mandatory), this may count as that year's required effectiveness check as long as it is written as a Self-Inspection and is approved as required. In addition, if a number of the actions in this procedure were used to determine information for other reports such as FDA 3-Day Field Alerts, this may also be used as the required effectiveness check.

Attachment C, Affiliate Recall-Mock Recall Information is required by the EU GMP Guidelines 2013/343/EC (section 6.5) to be completed and sent to the Responsible Person, Eli Lilly Ireland Holdings Limited, every time a mock recall or recall is performed. Mock recalls or recalls are to be conducted and documented for the EU at least every 2 years to comply with GQS131.

If the product in question is a controlled drug or a Lilly-designated Special Security Substance, refer to LQS303.

GQAAC is responsible for developing a Recall Strategy and documenting any action plans beyond those in the checklist in Attachment A, Market Action Response Plan Checklist based upon the recall classification agreed to by the FDA. GQAAC sends all reporting required by law to the FDA to meet the timing requirements as outlined in their local procedures. If any State Boards of Pharmacy require notification those will be issued by the NALO QA Rep responsible for coordinating State Licensing.

If the issue causing the recall or market withdrawal happened in distribution, NALO QA is responsible to help the recall coordinator by drafting any other immediate reporting such as 3-day field alerts, BPDRs, CIRM reports, etc.

For a graphical illustration of the way all groups work together during a market action, see Attachment D, Market Action Process Flow.

**NALO QA  
RESPONSIBILITIES  
DURING A RECALL  
OR MARKET  
WITHDRAWAL**

During a Recall or Market Withdrawal, NALO Quality Assurance follows this section. Documentation must be recorded at the time each step is carried out and retained by NALO in accordance with the Global Records Retention Schedule. Completed documentation must be made available to Regulatory authorities if asked.

If the issue for potential recall or market withdrawal is discovered in NALO, all steps below must be followed. Ensure that CQP-131-1 is also followed. If the issue for potential recall or market withdrawal is discovered in any area other than NALO, all steps below, with the exception of #'s 1, 3, 11, 12 and 13 must be followed (see Attachment A, Market Action Response Plan Checklist).

| Step | Action                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| 1    | Notify the site quality leader immediately.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 2    | Initiate the NALO Task Force consisting of representatives from: <ul style="list-style-type: none"> <li>Finished Good Returns^</li> <li>NASSC-CS</li> <li>Lilly Cares, if affected^</li> <li>Managed Healthcare Services (MHS)</li> <li>*Enfield/PDC Operations Manager</li> <li>Sample Accountability, if affected</li> <li>NALO Quality</li> <li>GQAAC Recall Coordinators</li> <li>Supply Chain representative</li> </ul> <p><b>Note:</b> 3<sup>rd</sup> party service providers for LillyCares and Finished Good Returns may be added at some point as well.</p>                         |
| 3    | Immediately generate a Notification to Management in accordance with LQP101-1, if applicable.<br><b>Note:</b> Significant safety information on a Lilly product will be escalated according to SEQs 301.                                                                                                                                                                                                                                                                                                                                                                                     |
| 4    | Identify the products and batches affected (scope). If there is a need to find all in-date batches of a particular product, first run BMBC populating the Material field with the first part of the Material number followed by an asterisk (for example, "PU3104"), and checking the "SLED outside remaining shelf life" box ONLY on the Shelf Life Expiration Data tab.<br><b>Note:</b> If only one or two batches are in scope, NALO QA may provide this data. If more batches are involved, the GQAAC Recall Coordinator obtains the Global Batch Traceability Report from Supply Chain. |
| 5    | Determine the manufacturing and packaging sites, the quantity manufactured, date of manufacture, and pack size for each affected product batch (MMBE). If MMBE report generated above shows that product is "in transit", contact NASSC-CS to determine the destination.<br><b>Note:</b> If only one or two batches are in scope, NALO QA may complete this step. If more batches are involved, the GQAAC Recall Coordinator obtains the Global Batch Traceability Report from Supply Chain.                                                                                                 |
| 6    | Run the Re-Id Report, ZS102, to determine if any of the affected batches were re-identified.<br><b>Note:</b> This step must only be executed by NALO QA if the scope is one or two batches. If the Global Batch Traceability Report is used, Re-Id's are already included.                                                                                                                                                                                                                                                                                                                   |

RESPONSIBILITIES  
DURING A RECALL OR  
MARKET WITHDRAWAL,  
CONTINUED**

| Step | Action                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7    | <p>If the product is located in either of the two Distribution Centers, place it on quarantine and segregate the material in accordance with USD-SOP-Quarantine of Finished Products-001 in physically segregated areas of sufficient capacity to allow orderly storage of recalled/withdrawn product, clearly marked and secure, and restricted to prevent unintentional or unauthorized use. Controlled Substance and SSS need to be stored securely with limited access. Electronic segregation that has been appropriately validated may be used in automated storage areas where product cannot be physically accessed and moved without the use of an electronic interface and appropriate security verification.</p> <ul style="list-style-type: none"> <li>• Ensure that the packed not shipped report is run and everything that has been packed, even if on the truck, is removed from the orders and quarantined</li> <li>• Ensure the counts are reconciled.</li> </ul> <p><b>Note:</b> In some instances, the product is not immediately quarantined as product still needs to be available in the market. However, eventually, product will need to be quarantined at the NALO distribution centers and this step can be completed at that time.</p> |
| 8    | If the product is located at a Third Party Warehouse, notify them to segregate the product.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 9    | On either the ZS178 ship history report or the Global Batch Traceability report, look for Clinical Trials shipments and let the Recall Coordinator know if there have been any.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 10   | <p>Notify Global Supply Chain (GSC) when product has been blocked/ship closed. At this time, GSC runs the GBT (Global Batch Traceability) report to determine the location of product shipped to distributors and directly to customers. This report must be collated by customer and the content verified by QA, Materials and Operations (Business QA) if the report is going to be sent to an agency. For more information regarding this report see the <a href="#">Global Batch Traceability (GBT) site</a>.</p> <p>Depending upon the complexity of the market action, NALO QA may be asked for totals per customer and customer addresses and phone/fax numbers inside and outside of working hours, and to work with MHS to get the phone numbers, if needed.</p> <p><b>Note:</b> In some instances, the product is not withdrawn right away, which means that the product will not be immediately quarantined in the NALO distribution centers. Global Supply Chain may run the GBT report at this time to get an idea what is in the market. Once the product is quarantined, the Global Supply Chain must run this report again.</p>                                                                                                                    |
| 11   | Review complaint records, including adverse events, for reports of similar defects.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 12   | Open a deviation and collect data to conduct a root cause investigation. Identify preventive actions using Quality Risk Management principles (i.e., risk to the quality of the drug across the product lifecycle). NALO QA must complete a preliminary investigation report containing the information required to complete this checklist. The final investigation (the NALO deviation) must be completed within 30 calendar days of market action initiation. NALO QA may be asked to help with the investigation even if NALO is not responsible. Refer to GQS131 to determine who needs to approve the final report and who requires a copy of the approved report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 13   | Initiate a health hazard evaluation (HHE) in accordance with GQS132 if the market action is <u>due to a product quality defect</u> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

**NALO QA  
RESPONSIBILITIES  
DURING A RECALL OR  
MARKET WITHDRAWAL,  
CONTINUED**

| Step | Action                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 14   | Send any product remaining in *Enfield or Plainfield to the Third Party Recall Service Provider, if, and when, instructed to do so in accordance with USD-SOP-Ship Recalled Mtl to 3 <sup>rd</sup> Pty Vndr-001. Alternatively, product may be sent for destruction in accordance with USD-SOP-Segregation Process and Scrapped Mtl Processing-001, if instructed to do so by GQAAC. <b>NALO QA ensures that the product serial numbers are decommissioned prior to shipment. Contact the NALO Inventory Control Specialist if needed. See GPR-501-5-115 and GPR-501-5-115-Tool 1 for process.</b> |
| 15   | Complete Attachment A, Market Action Response Plan Checklist, in accordance with DO23676, NALO Good Documentation Practices and SPV Training.                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 16   | Complete Attachment C, Affiliate Recall-Mock Recall Information and send to the Responsible Person, Eli Lilly Ireland Holdings Limited, <u>every time</u> a mock recall or recall is performed. (Mock recalls or recalls are to be conducted and documented for the EU at least every 2 years to comply with GQS131).                                                                                                                                                                                                                                                                              |
| 17   | Ensure that all documentation generated during the investigation is filed in the NALO GMP Library in accordance with the Global Records Retention Schedule.                                                                                                                                                                                                                                                                                                                                                                                                                                        |

NALO QA might be involved in an inspection of returned product. The need for and the extent of an inspection must be evaluated by the responsible Site Quality Leader in consultation with GQAAC. The results of the inspection, if conducted, must be documented in the final report. Additionally, if an inspection is NOT conducted, the rationale for not inspecting must be included in the final investigation report.

**Note:** Inspection of returned product provides an opportunity to collect valuable information with regard to the reason for the recall, however in certain situations; the inspection would not provide any additional information (such as, where it is known from batch records and retention samples that incorrect labeling was used).

**NALO TASK FORCE  
RESPONSIBILITIES  
FOR RECALLS**

NALO Task Force related items that must be completed (and initialed and dated by Quality Assurance):

1. At the beginning of the process, ensures that NALO Tech@Lilly is contacted to make them aware of the issue – they may be able to help.
2. Ensures copies of the “verbatim”, standby statements or core messages are received from the GQAAC Recall Coordinator. These are needed for the following groups: AE’s, external customers and sales representatives.
3. Gives “verbatims” to US NASSC-CS Management, who will use them to prepare NASSC-CS representatives for questions they may receive.
4. Ensures that Finished Product Returns notifies third party returns processors to contact the Lilly Recall/Withdrawal processor for information regarding the recall/withdrawal when asked to do so.
5. If serial numbers of distributed recalled product are requested, contact the Inventory Control Specialist in NALO Operations to retrieve that information.

---

**NALO NASSC-CS  
RESPONSIBILITIES**

During a recall or market withdrawal, NASSC-CS will:

1. Network with the wholesaler trade relations group (MHS) to provide them with information to be used for determination of customers to be notified and reimbursement method to be used.
2. Receive a copy of the official Recall letter noting what product is recalled, where to send product and how credit will be applied. (This is the letter that will be received by Lilly customers to whom affected product had been shipped.) They will also receive FAQs from MHS. NASSC-CS representatives will ensure that they can answer any questions received from customers regarding this letter.
3. Follow steps outlined by the wholesaler trade relations group (MHS) in terms product replacement, if applicable.

---

**THIRD PARTY  
RETURNED GOODS  
PROCESSOR  
RESPONSIBILITIES**

The Third Party Returned Goods Processor forwards any product included in the recall or market withdrawal received in error, to the Third Party Recall Service Provider for processing. Forward the entire, unopened package.

Alternatively, the Third Party Returned Goods Processor may receive withdrawn product only, and send for destruction under GQAAC protocol, when instructed to do so. **NALO QA ensures that the product serial numbers have been decommissioned prior to shipment for destruction. See GPR-501-5-115, and GPR-501-5-115-Tool 1 for process.**

---

**DISTRIBUTION OF  
RETURNED GOODS**

Goods returned from outside Lilly-controlled facilities as part of a Recall are not redistributed at a later date even if further investigation determines that the goods are not in violation of applicable government regulations and are safe and effective. The global recall coordinator is responsible for coordinating the destruction of returned goods. All returned goods are destroyed by an approved method of destruction. This destruction must be documented.

---

---

**NALO QA  
RESPONSIBILITIES  
DURING  
INCORRECTLY  
SHIPPED  
REGISTRY  
GOVERNED  
PRODUCT  
ONLY**

NALO Quality Assurance follows these steps if a Registry product has been shipped incorrectly (see Attachment B, Incorrectly Shipped Registry Governed Product Response Plan Checklist):

**Note:** Additional steps are required for market actions conducted for Registry Governed Product because of the regulatory requirements associated with them. These steps are specifically for NALO only if Registry Product has been incorrectly shipped.

1. Identify the product/batch(es) affected (scope).
  2. Identify the locations of these batches in the warehouse.
  3. Ensure that Operations cycle counts the locations.
  4. Determine the location (distribution profile) and dates of distribution of the affected product batches by running the ZS178 reports for each batch in accordance with USD-SOP-Processing GMP Data Requests-001. **Ensure that the SLED is added to this view of the table.**  
**Note: This is not necessary if we know where the product was shipped.**  
May also run the GBT (Global Batch Traceability) report to determine location of product shipped. If this report is to go to an agency, the content must be verified by QA, Materials and Operations. For more information regarding this report see the [Global Batch Traceability \(GBT\) site](#).
  5. Ensure that NASSC-CS runs their variant of the ZS178 report that includes the registration number of each customer. Ensure that each customer has a registration number recorded.
  6. Initiate the NALO Task Force consisting of representatives from:
    - Finished Good Returns
    - NASSC-CS
    - \*Enfield/PDC Operations (as required)
    - NALO Quality
    - Additional members may be added as the situation progresses.
  7. Initiate a Notification to Management in accordance with LQP101-1.
  8. Discuss with GQAAC if any Regulatory actions are needed. **If any reports such as a 3-day field alert, BPDR, etc., are needed, NALO QA is responsible for drafting these.**
  9. Open an Observation/deviation.
  10. Collect data for root cause investigation and identify preventive actions using Quality Risk Management principles.
  11. Initiate a health hazard evaluation (HHE) in accordance with GQS132, **if necessary**.
  12. Track the receipt of the product returned to the third party return goods processor. Ensure that the product serial numbers have been decommissioned prior to shipment for destruction. See GPR-501-5-115 and GPR-501-5-115-Tool 1 for process.
  13. Ensure that the Observation/deviation is completed within 30 calendar days. Follow CQP-131-1 to complete Form C from this CQP.
  14. Complete the action items in Attachment B, Incorrectly Shipped Registry Governed Product Response Plan Checklist.
  15. Complete Attachment C, Affiliate Recall-Mock Recall Information and send to the Responsible Person, Eli Lilly Ireland Holdings Limited every time a mock recall or actual recall is performed.
  16. Ensure all documentation generated during the investigation is filed in the NALO GMP Library in accordance with the Global Records Retention Schedule.

---

**NALO TASK  
FORCE  
RESPONSIBILITIES  
FOR  
INCORRECTLY  
SHIPPED  
REGISTRY  
GOVERNED  
PRODUCT**

1. Contact NALO Tech@Lilly to make them aware of the issue – they may be able to help.
  2. Ensure that NASSC-CS is prepared with a “core” message to give customers that have been affected, and that they replace customer stock as quickly as possible.
  3. Ensure that the third party returns good processor knows how many of each product/batch combinations they will receive back for destruction, **and that the product serial numbers have been decommissioned by NALO QA prior to shipment for destruction. See GPR-501-5-115 and GPR-501-5-115-Tool 1 for process.**
  4. If serial numbers of incorrectly shipped product are requested, contact the Inventory Control Specialist in NALO Operations to retrieve that information.
